PAE PROJECT NO. 9599

THREATENED AND ENDANGERED SPECIES STUDY

1.1 Proposed Action

The England Economic and Industrial District (EEID), also known as the England Authority, is proposing to develop a 700± acre light industrial site. The site will consist of streets, utilities, and other amenities to provide lots and acreage for future industrial purposes. The site is shown in Appendix A.

1.2 Affected Environment

The Endangered Species Act (ESA) [16 U.S.C. 1532 et. seq.] of 1973, as amended, was enacted to provide a program for the preservation of endangered and threatened species and to provide protection for the ecosystem upon which these species depend for their survival. All Federal agencies are required to implement protection programs for designated species and to use their authorities to further the purposes of the act. Responsibility for the identification of a threatened or endangered species and development of recovery plans lies with the Secretary of the Interior and the Secretary of Commerce.

The United States Fish and Wildlife Services (USFWS) and the National Marine Fisheries Service (NMFS) are the primary agencies responsible for implementing the ESA. The USFWS is responsible for birds, terrestrial, and freshwater species, while the NMFS is responsible for non-bird marine species. The USFWS's responsibilities under the ESA include: (1) the identification of threatened and endangered species; (2) the identification of critical habitats for listed species; (3) implementation of research on, and recovery efforts for, these species; and (4) consultation with other Federal agencies concerning measures to avoid harm to listed species. An endangered species is a species in danger of extinction throughout all or a significant portion of its range. A threatened species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range. Proposed species are those that have been formally submitted to Congress threatened when any of the five following criteria occur: (1) the current/imminent destruction, modification, or curtailment of their habitat or range; (2) overuse of the species for commercial, recreational, scientific, or educational purposes; (3) disease or predation; (4) the inadequacy of existing regulatory mechanisms; and (5) other natural or human-induced factors affection continued existence.

In addition, the USFWS has identified species that are candidates for listing as a result of identified threats to their continued existence. The "candidate" designation includes those species for which the USFWS has sufficient information on hand to support proposals to list as endangered or threatened under the ESA. However, proposed rules have not yet been issued because such actions are precluded at present by other listing activity.

The ESA also calls for the conservation of "Critical Habitat" – the areas of land, water, and air space that an endangered species needs for survival. Critical habitat also includes such things as food and water, breeding sites, cover or shelter, and sufficient habitat area to provide for normal population growth and behavior.

1.3 Federally Listed Species

Three federally listed species occur within Rapides Parish, the red-cockaded woodpecker (*Picoides borealis*), the Louisiana pine snake (*Pituophis melanoleucus ruthveni*), and the Louisiana pearlshell (*Margaritifera hembeli*). (See Table 1-1) No species listed as endangered, threatened, or as candidate species are known to occur within or near the proposed site. The proposed site was surveyed for protected species on November 1, 2012 and no federally protected species or potential habitat was found during the field surveys. Correspondence was submitted to the USFWS, November 6, 2012, regarding threatened and endangered species in the vicinity of the subject property. The USFWS reported that there will be no impact on those resources listed above in paragraph 1.2.

Table 1-1 Federally Protected Species Inhabiting Rapides Parish, Louisiana

Common/Scientific Name	Status	Habitat
Red-cockaded woodpecker (<i>Picoides borealis</i>)	Endangered	Open stands of pines with a minimum age of 80 to 120 years.
Bald Eagle (<i>Haliaeetus leucocephalus</i>)	Delisted*	Quiet areas, rivers, or lakeshores with large, tall trees.
Louisiana pine snake (<i>Pituophis melanoleucus ruthveni</i>)	Candidate	Sandy soils in longleaf pine forest.
Louisiana pearlshell (<i>Magaritifera hembeli</i>)	Threatened	Flowing water at depths ranging from 12 to 20 inches on sand and gravel substrates. The surrounding forest community is mixed hardwood-loblolly pine with a typical canopy closure of 75 to 100 percent.

Source: LDWF 2012

*The bald eagle receives Federal protection despite its removal from the Federal Threatened and Endangered species list under the Bald and Golden Eagle Protection Act.

1.4 State-Listed Species

The Louisiana Natural Heritage Program (LNHP), part of the Louisiana Department of Wildlife and Fisheries (LDWF), maintains lists of Species of Concern (SOC). This list includes species whose occurrence in Louisiana is or may be in jeopardy, or with known or perceived threats or population declines. These species are not necessarily the same as those protected by the Federal government under the ESA. A complete list of state-protected species can be found in Appendix D of this document.

The LDWF was contacted on November 6, 2012 and Responded on November 13, 2012 stating that after careful review of their database, no impacts to rare, threatened, or endangered species or critical habitats are anticipated for the proposed project. They also noted that no state or federal parks, wildlife refuges, scenic streams, or wildlife management areas are known at the specified site within Louisiana's boundaries.

1.5 Conclusion

Based upon the comments received from the various federal and state agencies (attached hereto in Appendix C) regarding endangered and threatened species; and other potential environmental impacts, it is our opinion that the development of the 700± acre tract for light industrial purposes(i.e. Industrial Park type setting), will have no impact to any threatened or endangered species.

According to the ESA, a significant impact on threatened and endangered species would occur if any action resulted in a jeopardy opinion for any endangered, threatened, or rare species. No federally or state listed species or breeding habitat for those species has been identified at the proposed site. Thus, there are no anticipated cumulative impacts to threatened and endangered species.

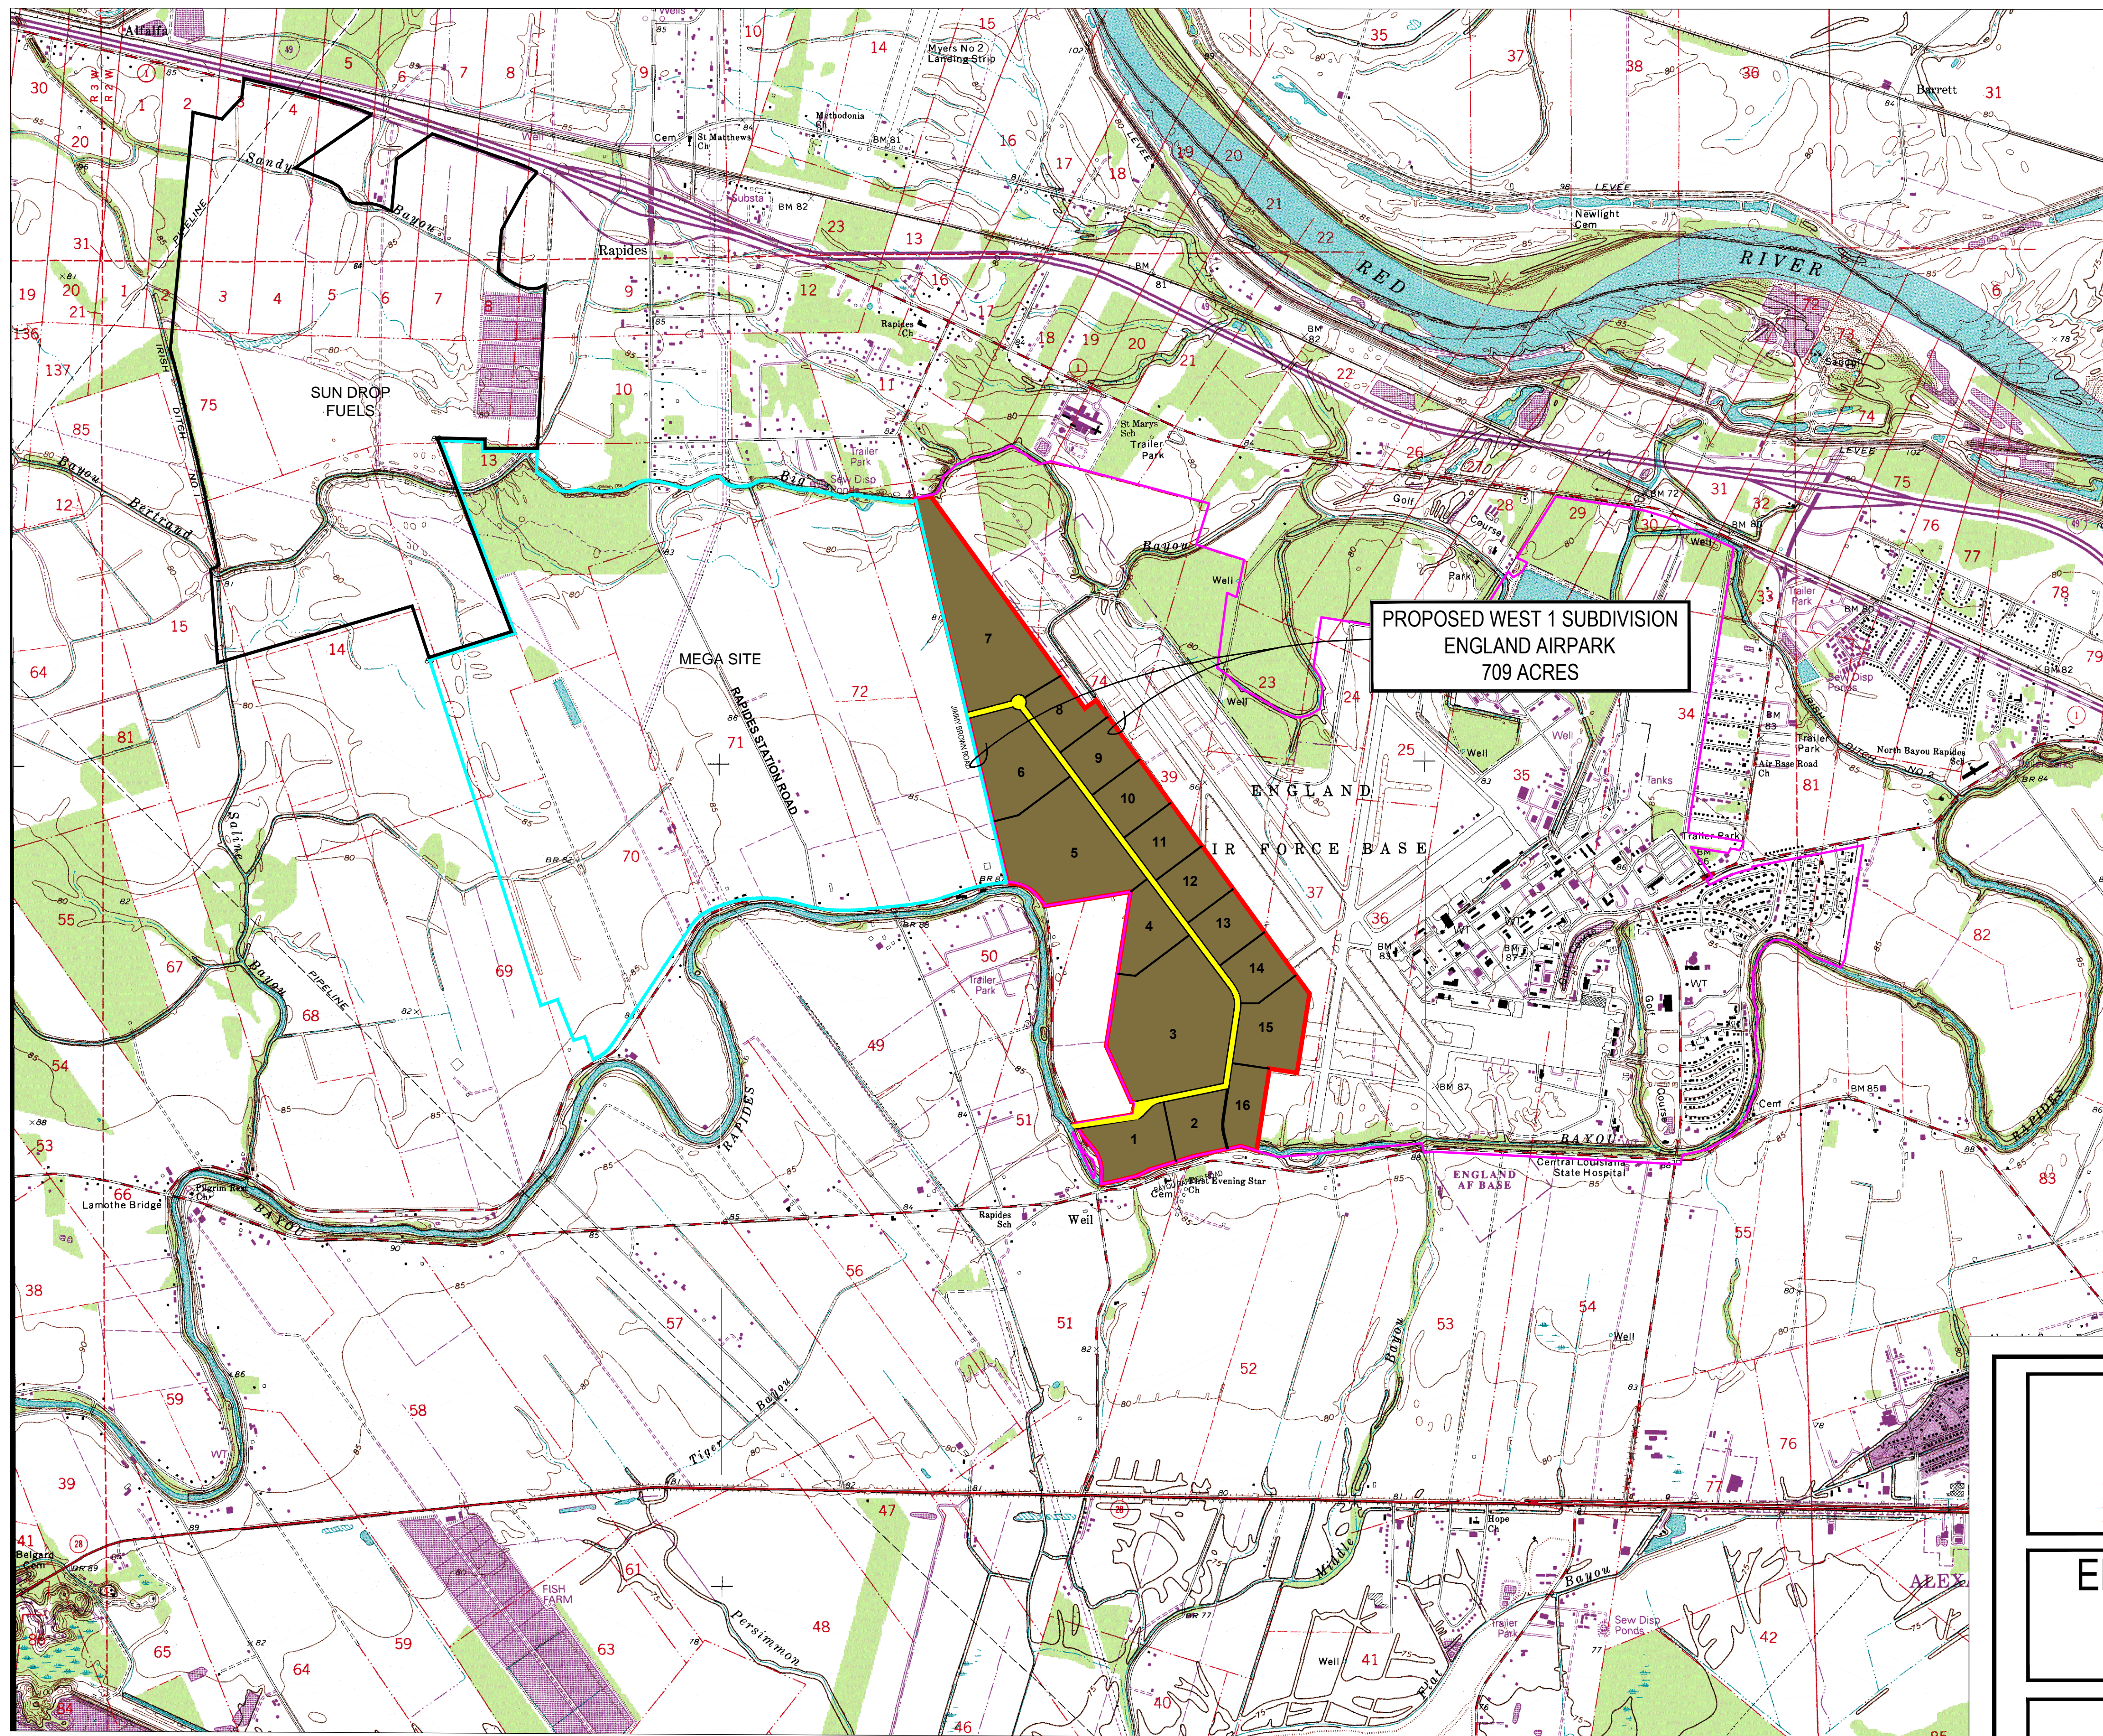

Please note that this Endangered and Threatened Species Study does not include wetlands delineations or any determinations of wetlands on the site. The wetlands delineation is established under a separate Study.

Re: England Airpark
700± Acre Site West One
LDED Industrial Site Certification
PAE Job No. 9599

Dear Ms. Fuller:

The England Economical Industrial Development District (England Authority) is working to obtain LDED/Industrial Site Certification on a 700± acre property located in Alexandria, Rapides Parish, Louisiana west of the Alexandria International Airport. The site is being proposed to be developed into an Industrial Park.

We are seeking consultation with your agency regarding any concerns you may have with regard to Threatened and Endangered Species, Critical Habitat, Vegetation, Fish and Wildlife, and Wild and Scenic Rivers. Should you have concerns on these matters or you feel this project will have an adverse affect on this area, please contact us so that we can discuss mitigation measures and incorporate such into the development of the project plan.

The England Authority also respectfully request that your agency provide a list of sensitive species and land issues that occur within the project areas, along with a description of the sensitive resources and a location map for those resources that you believe may be affected with future industrial use.

Please review this information and forward your comments to England Economic and Industrial Development District c/o Pan American Engineers, Attention: Thomas C. David, III, P.O. Box 89, Alexandria, Louisiana 71309. If you have any questions or require additional information, please do not hesitate to contact our office for assistance.

Yours very truly,

This project has been reviewed for effects to Federal trust resources under our jurisdiction and currently protected by the Endangered Species Act of 1973 (Act). The project, as proposed, () Will have no effect on those resources. () Is not likely to adversely affect those resources. This finding fulfills the requirements under Section 7(a)(2) of the Act.

PAE Job No. 9599

Project ID 3852012

Invoice Number 12111313

Personnel of the Habitat Section of the Coastal & Nongame Resources Division have reviewed the preliminary data for the captioned project. After careful review of our database, no impacts to rare, threatened, or endangered species or critical habitats are anticipated for the proposed project. No state or federal parks, wildlife refuges, scenic streams, or wildlife management areas are known at the specified site within Louisiana's boundaries.

The Louisiana Natural Heritage Program (LNHP) has compiled data on rare, endangered, or otherwise significant plant and animal species, plant communities, and other natural features throughout the state of Louisiana. Heritage reports summarize the existing information known at the time of the request regarding the location in question. The quantity and quality of data collected by the LNHP are dependent on the research and observations of many individuals. In most cases, this information is not the result of comprehensive or site-specific field surveys; many natural areas in Louisiana have not been surveyed. This report does not address the occurrence of wetlands at the site in question. Heritage reports should not be considered final statements on the biological elements or areas being considered, nor should they be substituted for on-site surveys required for environmental assessments. LNHP requires that this office be acknowledged in all reports as the source of all data provided here. If at any time Heritage tracked species are encountered within the project area, please contact the LNHP Data Manager at 225-765-2643. If you have any questions, or need additional information, please call 225-765-2357.

Sincerely,

for Amity Bass, Coordinator
