Re: Louisiana Certified Sites Program Application
England Airpark Site W2

Dear Mr. Broussard:

In reference to the abovementioned site at England Airpark, the City of Alexandria Water and Wastewater Systems both have greater than 250,000 gallons per day of excess capacity, as explained in greater detail below.

Please be advised that, as with any additions to our systems, all improvements must be constructed in accordance with City of Alexandria standards and requirements.

Our water system is capable of producing approximately 28.4 million gallons per day (MGD) with an annual average demand of approximately 10.4 MGD and peak usage of approximately 14 MGD. The current excess capacity of the water system is approximately 13.6 MGD.

Our wastewater system is permitted for 22 MGD and averages 11 MGD with a peak load of 27 MGD. We estimate the excess capacity of our wastewater system at approximately 6.5 MGD.

If you have any questions or require additional information, please call our office for assistance.

Sincerely,

Michael P. Marcotte
Director of Utilities

MPM/jg
